

Summer 2005 Marine Science Internships on the Oregon Coast

Research Experience for Undergraduates

www.hmsc.oregonstate.edu/REU

Apply by February 22, 2005

From Estuaries to the Deep Sea...

If you are considering graduate study or a professional career in the marine sciences, developing research skills through hands-on experience is one of the most valuable learning opportunities you can have. Oregon State University offers a 10-week, research-focused summer internship program at the Hatfield Marine Science Center (HMSC) in Newport, Oregon. The **Research Experience for Undergraduates (REU)** internship offers students opportunities to work with faculty mentors on research projects that advance knowledge and understanding of marine, coastal and estuarine environments. The program runs from June 12 to August 20, 2005.

The Hatfield Marine Science Center is one of the largest marine labs in the Pacific Northwest, a unique research community where students interact not only with university faculty, but also with scientists and staff working at federal and state agencies (EPA, NOAA, ODFW, USDA, and USFWS) located onsite. REU program mentors represent a wide range of research interests, including: Biology and Ecology of Marine Organisms, Oceanography, Marine Geology, Biogeochemistry, and Estuarine Ecology.

The HMSC boasts a world-class marine science library, lab facilities, and easy access to many excellent field research sites in the "living laboratory" of the Oregon coast. The physical beauty of the area is complemented by a wealth of outdoor recreational and natural history attractions nearby.

Eligibility

Currently enrolled undergraduates who have completed at least two years of coursework by June 2005 may apply. (Eligibility limited to U.S. citizens)
REU interns receive a weekly stipend, housing on-site, and round-trip transportation from their home area. Learn more and apply online at:
